

MEDIC FIRST AID® Bloodborne Pathogens

The updated MEDIC FIRST AID® Bloodborne Pathogens program is designed to train employees who have a significant health risk of occupational exposure to blood or other potentially infectious bodily fluids and materials. This training will help employees satisfy training requirements put forth by the Occupational Safety and Health Administration (OSHA).

To reduce the risks of transmission of bloodborne pathogen diseases, this program will explain how bloodborne diseases are transmitted, procedures you and your company can implement to minimize your risk of exposure, and what to do if you suspect you have become exposed to a bloodborne pathogen.

The MEDIC FIRST AID Bloodborne Pathogens program offers the same easy-learning, low-stress class environment you expect from all MEDIC FIRST AID training programs. Excellent video presentations are supported by quality printed student materials and an easy-to-use Facilitator Guide.

The MEDIC FIRST AID Bloodborne Pathogens program covers:

- OSHA Bloodborne Pathogens Standard
29 CFR 1910.1030
- Specific Bloodborne Pathogens—
Hepatitis B Virus, Hepatitis C Virus,
Human Immunodeficiency Virus (HIV)
- Transmitting Bloodborne Pathogens
- Your Employer's Exposure Control Plan
- Recognizing the Potential for Exposure
- Methods to Control Occupational Risk
- Using Personal Protective Equipment (PPE)
- Hepatitis B Immunization
- When an Exposure Occurs
- Housekeeping
- Communicating a Hazard in the Workplace
